DETAILED ACTION

Allowable Subject Matter

1. Claims 1-15 are allowed.
2. The following is an examiner's statement of reasons for allowance: Hung et al. (US 6,353,618) discloses a method for assembling lists of time slots available for allocation or deallocation in column 4 line 35 – column 5 line 16. Cole (US 6,519,280) discloses inserting an idle code into unused time slots in column 7 lines 7-46. Cole provides motivation in column 6 lines 37-42, stating that marking idle time slots saves processing time because the modulator does not perform any functions on marked slots. Confirmation messages are well known in the art, however, neither Hung, Cole, nor the prior art teaches or suggests the remaining limitations of claims 1 and 9. Namely, inserting data into new set(s) of time slots being allocated and discontinuing insertion of data in set(s) of time slots being deallocated and the commencement or discontinuation of insertion commencing upon receipt of the confirmation message.

Claims 2-8 and 10-15 depend from claims 1 and 9 and are therefore allowable.

Furthermore, Cole expressly teaches away from the limitations of claims 3 and 11 in column 3 lines 47-59 and Hung expressly teaches away from the limitations of claims 7 and 14 in column 9 lines 7-10.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Holmquist discloses a method of efficiently utilizing bandwidth by eliminating the need for polling and using a minimum silence period or marker to indicate a tributary as no data to send. The central device continuously monitors the transmissions of the tributaries and reassigns time slots to increase and maintain a high degree of efficiency.
